Author Index 2006

Al-Sweiti, Y	Modelling and control of an elastic ship-mounted crane using variable-gain model-based controller	239
Ambrósio, J	Influence of the contact–impact force model on the dynamic response of multi-body systems	21
Ambrósio, J	Spatial revolute joints with clearances for dynamic analysis of multi-body systems	257
Baker, J E	Fixed axode of a linkage coupler, its central tangent surface and its parameter of distribution	1
Bertsche, B	Design of low-noise manual automotive transmissions	79
Chang, F-A	Analysis of human body response to vibration using multi-body dynamics method	191
Chen, L	Grazing phenomena and fragmented strange attractors in a harmonically forced, piecewise, linear system with impacts	35
Claro, J C P	Influence of the contact–impact force model on the dynamic response of multi-body systems	21
Claro, J C P	Spatial revolute joints with clearances for dynamic analysis of multi-body systems	257
Doğan, S N	Design of low-noise manual automotive transmissions	79
Eizenberger, T	Separation of reference motions and elastic deformations in an elastic multi-body system	63
Feng, Z C	Design compensation for fabrication imperfections of tuning-fork gyroscopes	97
Flores, P	Influence of the contact–impact force model on the dynamic response of multi-body systems	21
Flores, P	Spatial revolute joints with clearances for dynamic analysis of multi-body systems	257
Gogu, G	Fast and simple dynamic analysis of flexible multi-body systems	219
Hao, X	Free vibration for toroidal drive	125
Hao, X	Forced response of electromechanical-integrated toroidal drive to load and voltage excitations	203
Herman, P	Non-linearity evaluation and reduction for serial manipulators	283
Karkoub, M A	Modelling and robust μ-synthesis control of an intelligent self balancing two-wheel vehicle	293
Korkealaakso, P	Multi-body simulation approach for fault diagnosis of a reel	9
Lambert, R J	Some characteristics of rolling-element bearings under oscillating conditions. Part 1: theory and rig design	157
Lambert, R J	Some characteristics of rolling-element bearings under oscillating conditions. Part 2: experimental results for interference-fitted taper-roller bearings	171
Lambert, R J	Some characteristics of rolling-element bearings under oscillating conditions. Part 3: experimental results for clearance-fitted taper-roller bearings and their relevance to the design of spindles with high dynamic stiffness	181
Lankarani, H M	Influence of the contact–impact force model on the dynamic response of multi-body systems	21
Lankarani, H M	Spatial revolute joints with clearances for dynamic analysis of multi-body systems	257
Lou, P	Comparison of two types of deflection functions for analysing the responses of the rail and the bridge under static or moving vehicles	105
Luo, A C J	Grazing phenomena and fragmented strange attractors in a harmonically forced, piecewise, linear system with impacts	35
Maißer, P	Seismic response analysis of wind turbine towers including soil-structure interaction	53
Mikkola, A	Multi-body simulation approach for fault diagnosis of a reel	9
Munteanu, M G	Fast and simple dynamic analysis of flexible multi-body systems	219
Offner, G	Separation of reference motions and elastic deformations in an elastic multi-body system	63
Pai, P F	Design compensation for fabrication imperfections of tuning-fork gyroscopes	97
Peng, C-P	Analysis of human body response to vibration using multi-body dynamics method	191
Pollard, A	Some characteristics of rolling-element bearings under oscillating conditions. Part 1: theory and rig design	157
Pollard, A	Some characteristics of rolling-element bearings under oscillating conditions. Part 2: experimental results for interference-fitted taper-roller bearings	171
Pollard, A	Some characteristics of rolling-element bearings under oscillating conditions. Part 3: experimental results for clearance-fitted taper-roller bearings and their relevance to the design of spindles with high dynamic stiffness	181
Poreddy, S	Design compensation for fabrication imperfections of tuning-fork gyroscopes	97

Priebsch, H H	Separation of reference motions and elastic deformations in an elastic multi-body system	63
Ray, P	Fast and simple dynamic analysis of flexible multi-body systems	219
Rouvinen, A	Multi-body simulation approach for fault diagnosis of a reel	9
Ryborz, J	Design of low-noise manual automotive transmissions	79
Schaffer, A	Stabilized index-1 differential-algebraic formulations for sensitivity analysis of multi-body dynamics	141
Soeffker, D	Modelling and control of an elastic ship-mounted crane using variable-gain model-based controller	239
Spitas, C	Calculation of overloads induced by indexing errors in spur gearboxes using multi-degree-of-freedom dynamical simulation	273
Spitas, V	Calculation of overloads induced by indexing errors in spur gearboxes using multi-degree-of-freedom dynamical simulation	273
Stone, B J	Some characteristics of rolling-element bearings under oscillating conditions. Part 1: theory and rig design	157
Stone, B J	Some characteristics of rolling-element bearings under oscillating conditions. Part 2: experimental results for interference-fitted taper-roller bearings	171
Stone, B J	Some characteristics of rolling-element bearings under oscillating conditions. Part 3: experimental results for clearance-fitted taper-roller bearings and their relevance to the design of spindles with high dynamic stiffness	181
Teng, T-L	Analysis of human body response to vibration using multi-body dynamics method	191
Wang, H	Forced response of electromechanical-integrated toroidal drive to load and voltage excitations	203
Xu, L	Free vibration for toroidal drive	125
Xu, L	Forced response of electromechanical-integrated toroidal drive to load and voltage excitations	203
Zhao, X	Seismic response analysis of wind turbine towers including soil-structure interaction	53
